ACADEMIC DETAILS

SRM Institute of Science and Technology (SRMIST) **Bachelor of Technology** Chennai, Tamil Nadu | 08/2024 – Present
Computer Science & Engineering (Expected Graduation: May 2028) | **CGPA: 9.52 / 10.0**

SKILLS

Programming Languages: Python 3.12+, Go (Golang), C++, TypeScript, JavaScript, SQL, HTML5/CSS3, Bash
Frameworks & Tools: Next.js 15, React 19, Node.js, Express, Tailwind CSS, Playwright, OWASP ZAP API, Git, Docker, AWS
Databases & Caching: PostgreSQL, Redis, Supabase DB, MongoDB, MySQL, SQLite
Core CS & Security: REST APIs, Systems Architecture, AppSec, Digital Forensics, Network Diagnostics, Socket Programming, DSA, OS
Languages: English, Hindi | **Creative Skills:** Technical Writing, SSDLC, System Architecture, Problem Solving

PROJECTS / OPEN SOURCE

1. HTTP Security Assessment Framework (v2.0.0) – Production Web Security Assessment Engine
- Architected an enterprise-grade 10-phase CLI web security assessment and cross-validation engine in Python 3.12+.
- Implemented Single Source of Truth architecture with Playwright headless browser engine for real-time DOM CSP enforcement verification.
- Connected OWASP ZAP REST API engine for cross-validation; achieved 92.24% test coverage across 130 unit tests with sub-second execution.

Tech: Python 3.12+, Playwright, OWASP ZAP API, Pytest, Rich CLI, Clean Architecture

2. Royal Stitch Market – Multi-Vendor Web Marketplace Engine
- Architected a modern e-commerce web marketplace providing independent tailors and sellers with real-time inventory and custom order workflows.
- Implemented secure Clerk role-based access control (Tailors, Customers, Admins) and Row-Level Security (RLS) in Supabase PostgreSQL.
- Engineered strict Zod input schema validation and Cloudinary media pipelines with optimistic UI state updates.

Tech: Next.js 15, TypeScript, Supabase, PostgreSQL, Clerk, Tailwind CSS, Cloudinary

3. PortFootprint – Multi-Threaded TCP Port Scanner & Service Fingerprinter
- Programmed a multi-threaded Python TCP scanner reducing scan latency by 60%+ using ThreadPoolExecutor socket workers.
- Developed priority protocol fingerprinting probes across HTTP, SSH, FTP, and SMTP services with structured JSON/CSV/HTML reporting.

Tech: Python, Socket Programming, Multithreading, Network Security, JSON/CSV/HTML

4. NTFS Forensic Recovery Tool – Low-Level Disk Artifact Carving Engine
- Programmed a standalone digital forensics parsing engine to directly inspect raw disk Master File Table ($MFT) records and runlists.
- Carved deleted file runs and magic number signatures with SHA-256 cryptographic integrity verification without external dependencies.

Tech: Python, Digital Forensics, Binary Parsing, NTFS Internals, File Systems

5. Velocity Builder – Modular Layout Engine & Instant Web Publisher
- Built a React layout engine featuring state history tracking (Undo/Redo) and Netlify API integration for instant page deployment.

Tech: React.js, Vite, Tailwind CSS, Netlify API, DnD Kit

LEADERSHIP & EXPERIENCE

Open Source Security Contributor | Security Research & Systems Engineering Chennai, Tamil Nadu | 2024 – Present
- Architected and shipped 6+ production applications spanning AppSec tooling, SOC platforms, digital forensics, and web architecture.
- Promoted SSDLC practices, SOLID design principles, and automated CI/CD security testing across personal and open-source projects.

Academic Support | Computer Lab Assistant & Cybersecurity Peer Tutor
- Conducted peer workshops on Secure Software Development Lifecycle (SSDLC), network auditing (Wireshark), and socket engineering.

Volunteer | Cyber Hygiene & Community Awareness Initiatives
- Led community digital literacy sessions promoting cyber hygiene, secure password management, and online data privacy awareness.

Software Engineer | Application Security Specialist | Building Resilient & Scalable Systems

HONORS & AWARDS

- **Academic Honor:** 9.52 CGPA / 10.0 at SRM Institute of Science and Technology (Top Tier Academic Performance)
- **Capture The Flag (CTF) Cyber Security:** 3rd Place Winner at SRM Institute of Science & Technology
- **Hackathon Achievements:** Selected Participant in Smart India Hackathon (SIH) 2025 & VITAP Hackathon 2026
- **Systems & AppSec Engineering:** Architected and shipped 6+ end-to-end applications across Security, Full-Stack Web, and Systems

Cybersecurity Specialist and Computer Science undergraduate at SRMIST with hands-on experience building production security engines, threat intelligence platforms, and low-level forensic utilities. Passionate about scalable architecture, high-concurrency systems, and zero-trust engineering.
