PROFESSIONAL SUMMARY

B.Tech CSE student specializing in Cybersecurity with a 9.52/10 CGPA and hands-on experience building security assessment, network analysis, threat intelligence, digital forensics, and backend systems. Skilled in Python, Go, Linux, Networking, SQL, and Cloud/DevOps tools. Seeking an entry-level role in cybersecurity, cloud/infrastructure, technical support, or IT engineering.

TECHNICAL SKILLS

Programming:

Python | Go | C++ | JavaScript/TypeScript | Bash

Cybersecurity:

Vulnerability Assessment | Web Security | Network Security | Digital Forensics | Threat Intelligence | Security Automation

Networking & Systems:

TCP/IP | DNS | DHCP | HTTP/HTTPS | IPv4/IPv6 | Linux | Windows | System Troubleshooting

Cloud & DevOps:

Docker | Docker Compose | GitHub Actions | AWS IAM | CI/CD | Git/GitHub

Databases & Development:

PostgreSQL | Redis | MySQL | MongoDB | REST APIs | Node.js | Next.js

Security & Development Tools:

Nmap | Wireshark | OWASP ZAP | Burp Suite | Playwright | Git/GitHub

SELECTED PROJECTS

HTTP Security Assessment Framework | Python 3.12+, Playwright, OWASP ZAP, Pytest

<https://github.com/beast6713/http-security-framework>

- Engineered an automated 10-phase security assessment CLI engine using Python, focusing on AST security header parsing, passive TLS/cookie audits, and weighted risk scoring.
- Implemented Playwright headless browser DOM checks, AST header rules (HSTS/CSP/XFO/XCTO), and OWASP ZAP REST API integration for alert cross-validation.
- Programmed safe Reflected XSS parameter verification using rate limiting and custom SafetyPolicy request safeguards, achieving 92.24% test coverage across 130 unit tests.

IP-Sentinel Threat Platform | Go (Golang), Next.js 14, Redis, PostgreSQL, Docker

<https://github.com/beast6713/IP-Sentinel>

- Architected a high-concurrency threat correlation engine in Go using Clean Architecture to decouple core domain logic from external provider adapters.
- Implemented concurrent Goroutine collection workers to query, parse, and normalize WHOIS, RDAP, DNS, and threat intelligence metadata.
- Integrated a Redis caching layer to bypass redundant external API requests, resulting in sub-millisecond cached threat audit response times.

PortFootprint Network Scanner | Python 3.12+, Socket API, ThreadPoolExecutor

<https://github.com/beast6713/PortFootprint>

- Developed a multi-threaded TCP network diagnostic CLI tool using Python and socket programming.
- Implemented a priority-based banner-grabbing registry pattern to match socket welcome strings across HTTP, SSH, FTP, and SMTP services.
- Achieved 60%+ scan latency reduction across targeted port ranges and exported structured JSON logs, CSV spreadsheets, and interactive HTML dashboards.

NTFS Forensic Artifact Carving Tool | Python 3.12+, NTFS Binary Carving, Cryptography

<https://github.com/beast6713/digital-forensics>

- Built a low-level digital forensics tool in Python that scans raw disk images by directly bypassing standard operating system file system APIs.
- Implemented raw NTFS Master File Table (MFT) sector parsing, runlist decoding, and file magic number signature carving algorithms.

- Verified evidence integrity by computing SHA-256 and MD5 cryptographic hashes for carved files to maintain forensic chain of custody.

EDUCATION

B.Tech — Computer Science Engineering (Cybersecurity)

SRM Institute of Science & Technology (SRM IST), Chennai, TN

Expected Graduation: May 2028 | CGPA: 9.52/10

Relevant Coursework:

Operating Systems | Computer Networks | DBMS | Digital Forensics | Data Structures & Algorithms

ACHIEVEMENTS

- 3rd Place — Capture The Flag (CTF) Cyber Security Competition, SRM IST (2025)
- Participant — Smart India Hackathon (SIH) 2025 (Engineered secure prototype)
- Participant — VITAP Hackathon Competition 2026
- Academic Distinction — Maintained a 9.52/10 CGPA in B.Tech Cybersecurity at SRM IST
